Storyboard #4: Developing a nursing team: 2. Suggest ways to create a conducive environment for teamwork

The Director of Nursing has directed your unit to develop a team to look at the recent trend of increasing incidences of central line-associated bloodstream infections (CLABSI).

Consider who you would ask to join the team!!

The nurse manager/charge understands the five stages of team development as a process where teams develop, mature, and leadership styles change to a more collaborative or shared leadership.

(Please drop and drag the stages of team building group formation states)

- A. Forming.
- B. Storming.
- C. Norming.
- D. Performing.
- E. Adjourning.

Thomas Jefferson University | HOME OF SIDNEY KIMMEL MEDICAL COLLEGE

Director of Nursing: Our infection prevention practitioner has noticed a recent trend throughout our pediatric hospital where there is a rise in our central line infection rates (CLABSI). I will need you to develop a team to examine why and how these rates are increasing and how we can mitigate our CLABSI rate.

You (Charge Nurse): I really like assist with most important initiative. What does our timeline look like?

Director of Nursing: Thank you so much - I appreciate hearing your willingness to lead this team. Once you assemble your team, could we have a meeting next month where you can appraise me of where the team is at in their investigation.

You (Charge Nurse): Yes, absolutely!! - that sounds doable - so glad to be of assistance.
