

Evidence-Based Practice Grant Review Evaluation Criteria

Expected components

- Background and clinical significance
 - How does your proposal contribute to enhancing care of children and their families?
- PICO(t) question, project goals
- EBP model and/or theoretical/conceptual framework
- Search strategy
- [Critical appraisal](#) of evidence
- Proposed practice change-implementation place, setting, human subjects protections.
- Evaluation: outcomes, process measures (if applicable), data analysis plan
- Budget

General considerations

- Feasibility (based on timeline and available resources)
- Overall project clarity

Research Grant Review Evaluation Criteria

Expected components

- Significance
 - Why is this study important for pediatric nursing practice and to the development of new knowledge?
 - Does it address a gap in what we know?
 - Will it lead to enhanced outcomes for children and families?
- Aims/purpose/hypothesis/research question
- Theoretical/conceptual framework (links to study variables)
- Literature review
- Methods:
 - study design including sample and setting
 - IRB approval status for studies involving human subjects, measures/tools/instruments, & data collection procedures
 - statistical analysis plan
- Budget

General considerations

- Originality
- Feasibility (based on timeline and available resources)
- Clarity of study
